Project Type:

AI-Assisted Frontend + Automation Project

Video Link: https://drive.google.com/file/d/1ajS0px1dX5-MvT0OmMuyIz4xXiwp9Rrl/view?usp=drive_link

Technologies Used:

HTML, CSS, JavaScript, Cursor AI, n8n, LLM, GitHub Pages

Problem Statement

Planning a trip involves many factors such as destination, duration, budget, travel mode, and preferences.

Manually creating a structured travel itinerary is time-consuming and inconsistent.

Objective:

To build a system that collects user travel details, generates a personalized itinerary using AI, and sends it automatically to the user's email.

Project Overview (What I Built)

I built a **Travel Itinerary Generator web application** that:

- Takes travel details from the user
- Validates inputs on the frontend
- Sends data to an automation workflow

- Uses AI to generate a personalized itinerary
- Sends the itinerary to the user's email automatically

Technologies Used

Frontend

- HTML5
- CSS3
- JavaScript

AI & Automation

- Cursor AI (ASK mode)
- n8n (workflow automation)
- Large Language Model (LLM)

Deployment

- GitHub Pages

Frontend Web Application

Features Implemented

- Responsive design (mobile + desktop)
- Travel input form
- Client-side validation
- Error and feedback messages
- Hosted on GitHub Pages

Travel Itinerary Generator

Share your trip details and we'll create a personalized itinerary for you.

Trip details

Destination / location

Number of days **Number of travelers**

Budget **Mode of travel**

Total amount in your currency (optional)

Contact & preferences

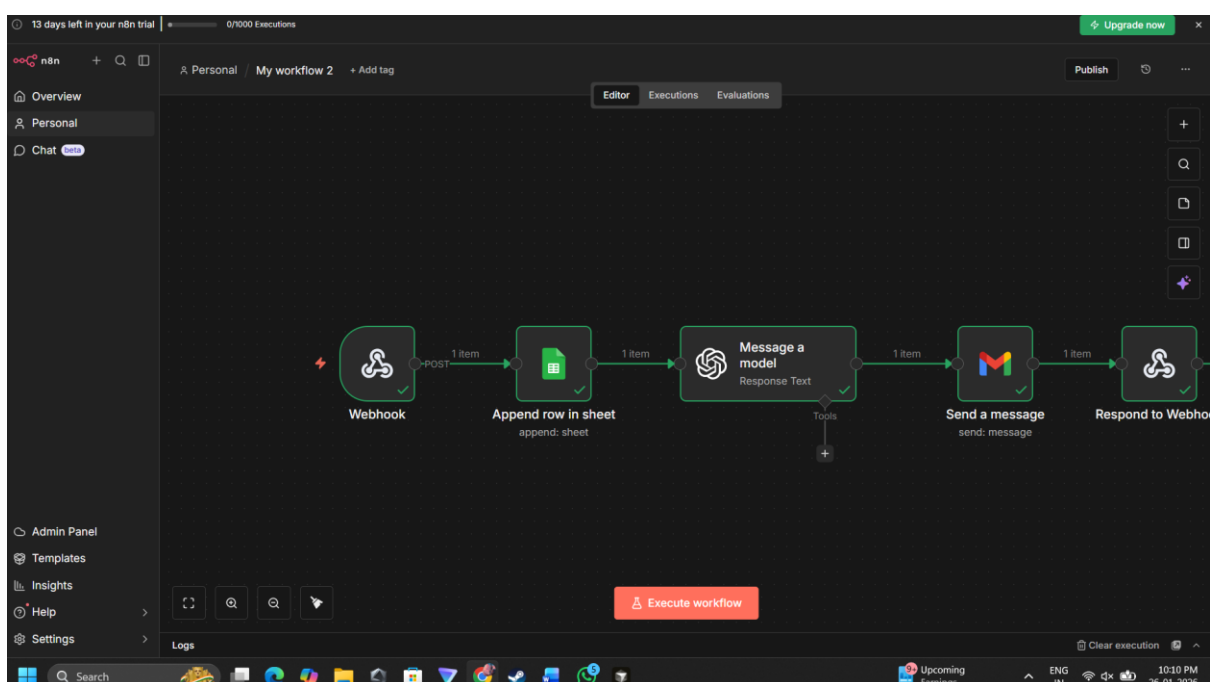

Email address

Additional preferences

Automation Workflow (n8n)

Workflow Description

- Webhook receives form data
- Data stored in Google Sheets
- AI model generates itinerary
- Merge node combines email + AI output
- Gmail node sends itinerary to user

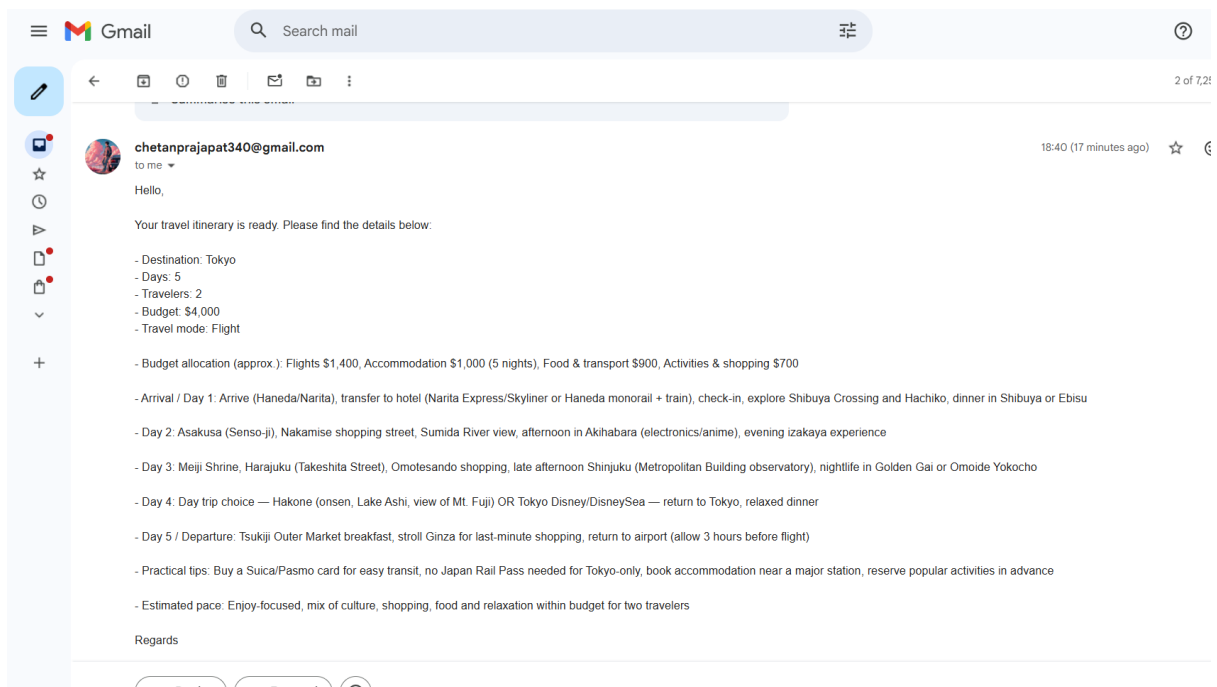

AI Integration (Responsible Use)

- AI used only to generate itinerary content
- Prompts written manually
- Output controlled and structured
- Developer reviewed and understood all outputs
- Cursor AI used as guidance, not direct copy

Email Automation Result

After successful submission:

- User receives itinerary on the **same email** they entered
- Email is clean, professional, and readable

Hosting & Deployment

The frontend is hosted using **GitHub Pages**, making it accessible online.

Travel Itinerary Generator

Share your trip details and we'll create a personalized itinerary for you.

Trip details

Destination / location

e.g. Tokyo, Japan or Paris, France
